

Masdar's Solar Program in Egypt

Masdar has delivered 30 megawatts (MW) of utility-scale clean energy projects and 7,000 solar home systems in remote and strategically important areas across Egypt. The four projects, customized specifically to the needs of local communities, provide energy to homes, schools, mosques, clinics, and government offices in areas that were lacking reliable electricity or were not connected to the national grid. The projects were part of a UAE-funded grant program for rural electrification in Egypt, executed in partnership with Egypt's New and Renewable Energy Authority. Masdar's Energy Services Unit, a provider of specialized renewable energy solutions provider, executed the project on behalf of the Abu Dhabi Government

QUICK FACTS

- Four projects, completed between March 2015 and April 2016
- Displaces 42,700 tonnes of CO₂ per year
- 70 villages and 141 communities gained reliable access to electricity
- Project financed by a grant from Abu Dhabi Fund for Development

Siwa Solar PV Plant, Egypt

Masdar's 10 megawatt (MW) solar photovoltaic (PV) power plant in Siwa, Egypt, was the first utility-scale solar power installation in Egypt and accounts for 30 percent of the grid capacity of Siwa City.

QUICK FACTS

- Produces 17,500 MWh of energy per year
- Eliminates 14,000 tonnes of CO₂ per year
- Powers 6,000 homes
- Consists of 74,640 micromorph thin-film panels
- Covers a land area of 175,000 m²
- Operated by Al Behira Electrical Distribution Company, owned by Egyptian Electricity Holding Company

Red Sea Solar Power Plants

The four solar PV plants in Egypt's Red Sea Governorate have a total capacity of 14 MW and provide reliable energy supply to support the area's vital tourism sector.

QUICK FACTS

- Built in the Red Sea cities of Marsa Alam (6 MW), Shalateen (5 MW), Abu Ramad (2 MW), and Halayeb (1 MW)
- Saves 40% of the fuel required by local diesel power plants
- Supplies electricity to nearly 8,000 homes
- Displaces approximately 20,000 tonnes of CO₂ annually

Al Wadi Al Jadeed Solar PV Plants

Masdar built three solar power plants in the Governorate of Al Wadi Al Jadeed, the largest and most sparsely inhabited region in Egypt. These new sources of electricity support efforts to improve the Governorate's local infrastructure, enable cultivation of local land and aid access to underground water supplies, thereby providing a major boost to the growth of an under-developed region. The plants were developed in Al Farafra, Abu Minqar, and Darb Al Arbaeen. They provide electricity to over 4,800 homes and displace over 8,700 tonnes of CO₂ emissions, and reduce the diesel consumption of existing power plants by over 40 percent.

QUICK FACTS

- Located in the cities of Al Farafra (5 MW), Abu Minqar (0.5 MW) and Darb Al Arbaeen (0.5 MW)
- Saves 40% of the fuel required by local diesel power plants
- Supplies electricity to over 4,800 homes
- Eliminates 8,700 tonnes of CO₂ per year

7,000 Solar Home Systems

Masdar has provided 7,000 standalone solar home systems (SHS) to homes and public or community buildings in remote areas in six governorates without access to the national electricity grid. Each SHS consists of two solar panels, two batteries, charge controllers, energy saving light bulbs, cables, switches, and a mounting structure.

QUICK FACTS

- Located in Sohag, Matrouh, Qina, Aswan, Luxor, and Al Wadi Al Jadeed Governorates
- Nearly 7,000 homes benefit from the systems
